

SDKEBOOST: 700W Brushless Power for Every Bike

We've all seen what most e-bike kits do to bikes — tangled wires, bulky boxes, and a setup that looks more like a DIY experiment than something built to ride every day.

With **SDKEBOOST**, we set out to change that.

From day one, our team of **engineers, cyclists, and product designers** shared a single vision:

to create a system that enhances your bike's performance **without sacrificing its original beauty**.

After **dozens of design refinements** and countless road tests, we arrived at something truly seamless.

Every detail is purpose-built:

- The **battery** fits naturally onto the frame.
- The **controller** mounts neatly to the handlebar.
- The **motor** stays compact, low-profile, and balanced.

No messy wires. No awkward add-ons. Just clean lines, smooth integration, and effortless power — so your bike stays **yours**, only smarter.

Ride Farther And Easier With **700W Of Peak Power**

13.5Ah High-Capacity Battery

8 sec Install

**Integrated Fender
& Durable Housing**

**Switch modes
at any time**

**Smart LCD Display
& Control**

**Speeds up to 20 mph (USA)
25 km/h (EU)**
